

How do we transform a system to be Cloud Native?

The diagram below shows the action spectrum and adoption roadmap. You can use it as a blueprint for adopting cloud-native in your organization.

For a company to adopt cloud native architecture, there are 6 aspects in the spectrum:

1. Application definition development
2. Orchestration and management

3. Runtime
4. Provisioning
5. Observability
6. Serverless

Over to you: Where does your system stand in the adoption roadmap?
